E-Mail Address: Rincon-Mora@gatech.edu, Office: Van Leer 482

TIME AND LOCATION: Mondays and Wednesdays at 3–4:50 p.m., unless otherwise noted below.

OFFICE HOURS: To be announced

USEFUL REFERENCE: SPICE or PSPICE Reference Manual (from class URL).

PREREQUISITE: ECE 4430 or 4330 (or equivalent)

SPICE SIMULATOR: Software accessible via the URL for the class.

CLASS URL: www.Rincon-Mora.com/classes under the link for "ECE 8813".

Course Objective: The course extends the concepts of analog and power circuits begun in ECE 4430 and 4330 and applies them to integrated circuits (ICs) used to energize and power portable microelectronic devices. The course teaches how to design ICs that draw, condition, and supply power to sustain, among others, sensor, interface, processing, and telemetric functions. The aim is to cultivate and develop the skillset necessary to model (steady state and across frequency), analyze (steady-state, across-frequency, and time-domain signals), and design transistor-level power-supply circuits using bipolar and CMOS technologies. So after establishing what a typical system requires, the course first reviews analog concepts like frequency response, analog building blocks, and negative feedback. With that foundation in hand, linear regulator ICs and systems are next, from feedback control and power-supply rejection to protection and characterization. The course ends with switched-inductor dc-dc converters, from power stages and frequency response to feedback control and practical circuit realizations. In all, the material places emphasis on basic and intuitive understanding of circuits and systems that transcends mathematical and algebraic formulations to empower a practicing engineer to design practical power-conditioning systems.

Course-Grade Composition:

<table>
<thead>
<tr>
<th>Component</th>
<th>Weight</th>
</tr>

Important: WHEN IN DOUBT, PLEASE STOP ME DURING LECTURE AND ASK QUESTIONS, but refrain from asking questions about material missed because of class absences.
COURSE RULES

In Class: All students must be in their seats before class begins.
Cellular phones, laptops, and tablets must be off and out of sight.
No smoking, eating, or drinking in class.
All students are responsible for all material covered and assignments announced in class and over e-mail.

Exams: No textbooks or notes allowed.
Calculators cannot be used in the programmable mode.
No make-up exams without obtaining an approval well before the date of the test.
Grades become final one week after tests are returned.
Pages must be stapled and problems must be in numerical order (bring a small stapler if necessary).
All answers must be circled marked and clearly.

HW: Collaboration between students is allowed and encouraged, unless otherwise stipulated.
Submitted assignments must be unique – identical assignments split the grade.
Late submissions lose 20% of the grade for each day they are late, including weekends.
No electronic e-mail submissions allowed.
Grades become final one week after they are available.
All assignments must include a cover sheet with ECE 6412, your name, date, and assignment number.
Label all nodes, voltages, currents, and component values in schematics.
Ensure methods used to obtain solutions are clear.
Numerical answers must contain proper dimensional units.
Problems must be in numerical order and answers must be clearly marked and circled.
Use only text version of SPICE.
Include netlist and control text used to generate all SPICE results.
Remove unnecessary details from SPICE-generated results and highlight important information.

Preparing for Class: Review the sections in the book and references that correspond to the topics outlined in this syllabus and discussed in class. Review lecture slides, examples, and assignments when preparing for exams.

Assistance: I will provide assistance in direct proportion to the written efforts demonstrated in your own attempts to understand the concepts and solve the problems in question.

Missed Lectures: Contact one of your peers for missed assignments, announcements, and material covered in class.

Academic Honesty: Georgia Tech's Academic Honor Code is described at www.deanofstudents.gatech.edu. All Georgia Tech students must know and follow these rules, and instructors must evaluate each student individually and as fairly as humanly possible. In accordance to the Honor Code, I expect your cooperation in reporting suspicious acts relating to academic misconduct. I must and will therefore "report (all) instances of academic dishonesty to the Office of the Dean of Students." So out of respect for your peers, professors, Georgia Tech, and alumni, which includes me, please do not engage in dishonest activities in the classroom or at Georgia Tech.

Special Circumstances: If you have a disability that requires special accommodations, please send me a note and schedule an appointment with the ADAPTS office (www.adapts.gatech.edu) to discuss any special needs.

TENTATIVE COURSE TOPICS

1. Portable Systems
2. Review of Analog ICs
3. Linear-Regulator ICs
4. Linear-Regulator Systems
5. Switched-Inductor DC-DC Supplies
6. Switched-Inductor DC-DC Systems
7. Voltage References (if time permits)
